Asthma cases and deaths are on the increase in the United States and in many other Western countries, despite major advancements in treatment. This rise has made asthma an especially important public health issue, because it comes at a time when deaths from most other causes are on the decline. By 1998, the number of Americans with asthma had reached an estimated 17.3 million. The number of asthma deaths more than doubled between 1979 and 1995, totaling 5,637.

Asthma Sourcebook brings together current information on asthma for the layperson. It covers the reasons for the rise in cases of asthma, including better diagnosis of the disease, increased exposure to environmental allergens and irritants, increased exposure of children to parents' tobacco smoke, and psychosocial and socioeconomic factors. In addition, statistical data, reports on research and prevention measures, and new treatment programs are presented. A comprehensive glossary and directory of professional organizations and online resources provide guidance to readers for further help and information.
