Groundwater is a basic resource for humans and natural ecosystems and is one of the nation's most important natural resources. Groundwater is pumped from wells to supply drinking water to about 130 million U.S. residents and is used in all 50 states. About 40 percent of the nation's public water supply and much of the water used for irrigation is provided by groundwater.

Despite the importance of groundwater as one of our most precious natural resources, an organized, effective program to provide an ongoing assessment of the nation's groundwater resources does not exist. With encouragement from the U.S. Congress, the USGS is planning for a new program of regional and national scale assessment of U.S. groundwater resources, thus helping bring new order to its various groundwater resources-related activities. The Survey's senior scientists requested advice in regard to the design of such a program. In response, the committee undertook this study in support of developing an improved program relevant to regional and national assessment of groundwater resources.

This report is a product of the Committee on USGS Water Resources Research, which provides consensus advice on scientific, research, and programmatic issues to the Water Resources Division (WRD) of the U.S. Geological Survey (USGS). The committee is one of the groups that work under the auspices of the Water Science and Technology Board of the National Research Council (NRC). The committee considers a variety of topics that are important scientifically and programmatically to the USGS and the nation, and it issues reports when appropriate.

This report concerns the work of the WRD in science and technology relevant to assessments of groundwater resources on regional and national scales. The USGS has been conducting scientific activity relevant to groundwater resources for over 100 years and, as summarized in Appendix A, today groundwater-related work occurs throughout the WRD.

From reader reviews:

Wayne Santiago:

Here thing why that Investigating Groundwater Systems on Regional and National Scales are different and dependable to be yours. First of all examining a book is good but it depends in the content of it which is the content is as delightful as food or not. Investigating Groundwater Systems on Regional and National Scales giving you information deeper since different ways, you can find any publication out there but there is no publication that similar with Investigating Groundwater Systems on Regional and National Scales. It gives you thrill reading journey, its open up your own personal eyes about the thing that will happened in the world which is possibly can be happened around you. You can actually bring everywhere like in park your car, café, or even in your approach home by train. For anyone who is having difficulties in bringing the paper book maybe the form of Investigating Groundwater Systems on Regional and National Scales in e-book can be your substitute.

Hazel Mishler:

Nowadays reading books become more and more than want or need but also work as a life style. This reading addiction give you lot of advantages. Associate programs you got of course the knowledge the actual information inside the book that improve your knowledge and information. The data you get based on what kind of publication you read, if you want have more knowledge just go with training books but if you want really feel happy read one along with theme for entertaining such as comic or novel. The actual Investigating Groundwater Systems on Regional and National Scales is kind of guide which is giving the reader unstable experience.

Mary Young:

Are you kind of stressful person, only have 10 or even 15 minute in your day time to upgrading your mind proficiency or thinking skill also analytical thinking? Then you have problem with the book compared to can satisfy your limited time to read it because this time you only find publication that need more time to be go through. Investigating Groundwater Systems on Regional and National Scales can be your answer since it can be read by an individual who have those short free time problems.

Dave Arreola:

In this period globalization it is important to someone to find information. The information will make someone to understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of references to get information example: internet, newspaper, book, and soon. You will see that now, a lot of publisher which print many kinds of book. The actual book that recommended to you is Investigating Groundwater Systems on Regional and National Scales this guide consist a lot of the

information from the condition of this world now. That book was represented how do the world has grown up. The language styles that writer value to explain it is easy to understand. The actual writer made some research when he makes this book. This is why this book suited all of you.
