Offshore Technology in Civil Engineering: Hall of Fame Papers from the Early Years, volume 6

Templeton, J. S., Young, Alan G., Kallaby, Joseph

This is the sixth volume in a series of publications containing classic papers from the early years of the Offshore Technology Conference (OTC), the world's leading event for the development of offshore resources in the fields of exploration, drilling, production, and environmental protection. The American Society of Civil Engineers, through its participation in and support of the OTC, plays a major role in the innovation and evolution of the technologies needed to overcome the challenges facing development of resources in the offshore environment. Since the OTC began in 1969, over 10,000 papers in the various technical disciplines central to offshore development have been presented. A few of the civil engineering papers presented through OTC's history provided innovation in, vision for, and lasting impact on the design, construction, or installation of offshore infrastructure. Offshore Technology in Civil Engineering: Hall of Fame Papers from the Early Years, Volume Six is a collection of the seven winning papers inducted in 2011 at an award ceremony during OTC in May of 2011. The engineering methods published in these papers have proven their value through widespread use, permeating codes, standards, guidelines, and engineering software.
