Growth and Diffusion Phenomena: Mathematical Frameworks and Applications (Texts in Applied Mathematics) Robert B. Banks

Diffusion and growth phenomena abound in the real world surrounding us. Some examples: growth of the world's population, growth rates of humans, public interest in news events, growth and decline of central city populations, pollution of rivers, adoption of agricultural innovations, and spreading of epidemics and migration of insects. These and numerous other phenomena are illustrations of typical growth and diffusion problems confronted in many branches of the physical, biological and social sciences as well as in various areas of agriculture, business, education, engineering medicine and public health. The book presents a large number of mathematical models to provide frameworks for the analysis and display of many of these. The models developed and utilized commence with relatively simple exponential, logistic and normal distribution functions. Considerable attention is given to time dependent growth coefficients and carrying capacities. The topics of discrete and distributed time delays, spatial-temporal diffusion and diffusion with reaction are examined. Throughout the book there are a great many numerical examples. In addition and most importantly, there are more than 50 in-depth "illustrations" of the application of a particular framework or model based on real world problems. These examples provide the reader with an appreciation of the intrinsic nature of the phenomena involved. They address mainly readers from the physical, biological, and social sciences, as the only mathematical background assumed is elementary calculus. Methods are developed as required, and the reader can thus acquire useful tools for planning, analyzing, designing, and evaluating studies of growth transfer and diffusion phenomena. The book draws on the author's own hands-on experience in problems of environmental diffusion and dispersion, as well as in technology transfer and innovation diffusion.

From reader reviews:

Lola Taylor:

Do you have favorite book? For those who have, what is your favorite's book? Publication is very important thing for us to be aware of everything in the world. Each guide has different aim as well as goal; it means that publication has different type. Some people sense enjoy to spend their the perfect time to read a book. They are reading whatever they consider because their hobby is reading a book. Why not the person who don't like examining a book? Sometime, individual feel need book if they found difficult problem or even exercise. Well, probably you will require this Growth and Diffusion Phenomena: Mathematical Frameworks and Applications (Texts in Applied Mathematics).

Bonnie Abramowitz:

Have you spare time for any day? What do you do when you have more or little spare time? Yeah, you can choose the suitable activity with regard to spend your time. Any person spent their own spare time to take a walk, shopping, or went to the Mall. How about open or read a book called Growth and Diffusion Phenomena: Mathematical Frameworks and Applications (Texts in Applied Mathematics)? Maybe it is to get best activity for you. You understand beside you can spend your time using your favorite's book, you can smarter than before. Do you agree with its opinion or you have additional opinion?

Claudia Kelley:

Do you have something that you prefer such as book? The guide lovers usually prefer to opt for book like comic, limited story and the biggest an example may be novel. Now, why not trying Growth and Diffusion Phenomena: Mathematical Frameworks and Applications (Texts in Applied Mathematics) that give your enjoyment preference will be satisfied simply by reading this book. Reading routine all over the world can be said as the opportunity for people to know world much better then how they react to the world. It can't be explained constantly that reading addiction only for the geeky individual but for all of you who wants to possibly be success person. So , for every you who want to start studying as your good habit, you may pick Growth and Diffusion Phenomena: Mathematical Frameworks and Applications (Texts in Applied Mathematics) become your personal starter.

Priscilla Garcia:

Many people spending their time by playing outside with friends, fun activity with family or just watching TV 24 hours a day. You can have new activity to invest your whole day by looking at a book. Ugh, ya think reading a book can actually hard because you have to bring the book everywhere? It okay you can have the e-book, delivering everywhere you want in your Mobile phone. Like Growth and Diffusion Phenomena: Mathematical Frameworks and Applications (Texts in Applied Mathematics) which is keeping the e-book version. So , why not try out this book? Let's observe.
