The idea of modeling the behaviour of phenomena at multiple scales has become a useful tool in both pure and applied mathematics. Fractal-based techniques lie at the heart of this area, as fractals are inherently multiscale objects; they very often describe nonlinear phenomena better than traditional mathematical models. In many cases they have been used for solving inverse problems arising in models described by systems of differential equations and dynamical systems.

"Fractal-Based Methods in Analysis" draws together, for the first time in book form, methods and results from almost twenty years of research in this topic, including new viewpoints and results in many of the chapters. For each topic the theoretical framework is carefully explained using examples and applications.

The second chapter on basic iterated function systems theory is designed to be used as the basis for a course and includes many exercises. This chapter, along with the three background appendices on topological and metric spaces, measure theory, and basic results from set-valued analysis, make the book suitable for self-study or as a source book for a graduate course. The other chapters illustrate many extensions and applications of fractal-based methods to different areas. This book is intended for graduate students and researchers in applied mathematics, engineering and social sciences.

Herb Kunze is a professor of mathematics at the University of Guelph in Ontario. Davide La Torre is an associate professor of mathematics in the Department of Economics, Management and Quantitative Methods of the University of Milan. Franklin Mendivil is a professor of mathematics at Acadia University in Nova Scotia. Edward Vrscay is a professor in the department of Applied Mathematics at the University of Waterloo in Ontario. The major focus of their research is on fractals and the applications of fractals.

From reader reviews:

Lisa Hegland:

This Fractal-Based Methods in Analysis book is absolutely not ordinary book, you have after that it the world is in your hands. The benefit you receive by reading this book is usually information inside this reserve incredible fresh, you will get data which is getting deeper a person read a lot of information you will get. This kind of Fractal-Based Methods in Analysis without we understand teach the one who examining it become critical in thinking and analyzing. Don't possibly be worry Fractal-Based Methods in Analysis can bring if you are and not make your handbag space or bookshelves' turn into full because you can have it with your lovely laptop even phone. This Fractal-Based Methods in Analysis having excellent arrangement in word as well as layout, so you will not feel uninterested in reading.

Nellie Davis:

The guide with title Fractal-Based Methods in Analysis contains a lot of information that you can learn it. You can get a lot of benefit after read this book. This book exist new understanding the information that exist in this book represented the condition of the world at this point. That is important to yo7u to know how the improvement of the world. This specific book will bring you with new era of the the positive effect. You can read the e-book in your smart phone, so you can read that anywhere you want.

Della Bailey:

Are you kind of active person, only have 10 as well as 15 minute in your day time to upgrading your mind expertise or thinking skill also analytical thinking? Then you have problem with the book as compared to can satisfy your short period of time to read it because all this time you only find book that need more time to be read. Fractal-Based Methods in Analysis can be your answer as it can be read by you who have those short spare time problems.

Dave Edwards:

A lot of e-book has printed but it differs. You can get it by world wide web on social media. You can choose the very best book for you, science, comic, novel, or whatever through searching from it. It is known as of book Fractal-Based Methods in Analysis. You can include your knowledge by it. Without making the printed book, it could add your knowledge and make a person happier to read. It is most significant that, you must aware about reserve. It can bring you from one spot to other place.
