Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical Sciences)

Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical Sciences)

Next Generation Sequencing (NGS) is the latest high throughput technology to revolutionize genomic research. NGS generates massive genomic datasets that play a key role in the big data phenomenon that surrounds us today. To extract signals from high-dimensional NGS data and make valid statistical inferences and predictions, novel data analytic and statistical techniques are needed. This book contains 20 chapters written by prominent statisticians working with NGS data. The topics range from basic preprocessing and analysis with NGS data to more complex genomic applications such as copy number variation and isoform expression detection. Research statisticians who want to learn about this growing and exciting area will find this book useful. In addition, many chapters from this book could be included in graduate-level classes in statistical bioinformatics for training future biostatisticians who will be expected to deal with genomic data in basic biomedical research, genomic clinical trials and personalized medicine.

About the editors:

Somnath Datta is Professor and Vice Chair of Bioinformatics and Biostatistics at the University of Louisville. He is Fellow of the American Statistical Association, Fellow of the Institute of Mathematical Statistics and Elected Member of the International Statistical Institute. He has contributed to numerous research areas in Statistics, Biostatistics and Bioinformatics.

Dan Nettleton is Professor and Laurence H. Baker Endowed Chair of Biological Statistics in the Department of Statistics at Iowa State University. He is Fellow of the American Statistical Association and has published research on a variety of topics in statistics, biology and bioinformatics.

From reader reviews:

Agnes Figueroa:

Book is to be different per grade. Book for children until adult are different content. We all know that that book is very important for us. The book Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical Sciences) had been making you to know about other knowledge and of course you can take more information. It is quite advantages for you. The publication Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical Sciences) is not only giving you more new information but also for being your friend when you truly feel bored. You can spend your personal spend time to read your book. Try to make relationship together with the book Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical Sciences). You never really feel lose out for everything in the event you read some books.

Ladonna Warren:

Reading a publication tends to be new life style in this particular era globalization. With studying you can get a lot of information that can give you benefit in your life. With book everyone in this world can certainly share their idea. Books can also inspire a lot of people. Many author can inspire their reader with their story or even their experience. Not only situation that share in the publications. But also they write about the knowledge about something that you need example of this. How to get the good score toefl, or how to teach your kids, there are many kinds of book which exist now. The authors these days always try to improve their skill in writing, they also doing some investigation before they write on their book. One of them is this Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical Sciences).

William Ward:

Spent a free time to be fun activity to accomplish! A lot of people spent their leisure time with their family, or all their friends. Usually they carrying out activity like watching television, going to beach, or picnic from the park. They actually doing ditto every week. Do you feel it? Do you want to something different to fill your free time/ holiday? Can be reading a book might be option to fill your no cost time/ holiday. The first thing you ask may be what kinds of publication that you should read. If you want to try out look for book, may be the reserve untitled Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical Sciences) can be good book to read. May be it may be best activity to you.

Sonia Cote:

E-book is one of source of knowledge. We can add our expertise from it. Not only for students but native or citizen require book to know the change information of year to year. As we know those textbooks have many advantages. Beside many of us add our knowledge, may also bring us to around the world. By book Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical

Sciences) we can consider more advantage. Don't one to be creative people? For being creative person must want to read a book. Only choose the best book that suitable with your aim. Don't possibly be doubt to change your life at this book Statistical Analysis of Next Generation Sequencing Data (Frontiers in Probability and the Statistical Sciences). You can more attractive than now.
