Signal Processing Exercises Ph.D. Fredrik Gunnarsson, Ph.D. Fredrik Tjarnstrom, Fredrik Gustafsson

This book of signal processing exercises and can be used together with the text book "Signal Processing" by Fredrik Gustafsson, Lennart Ljung and Mille Millnert. The chapters of the books are aligned, so that the exercises match each chapter of the text book. The authors treat classical digital signal processing based on transforms and filters in the first part, and model-based digital processing in the second part. Some exercises are more theoretical and solved by hand, while others are intended for Matlab on a computer. "Signal Processing" is inspired by real problems, and so are the exercises, emphasized by the use of data sets, both simulated and real. Most exercises have complete solutions, and a section with hints provides guidance. Selected exercises also result in a Matlab function corresponding to specific signal processing algorithms. These functions are used to solve other exercises, allowing the reader to build up a signal processing tool box as he proceeds through the material. The homepage contains more information and links to Matlab functions, data sets and examples used in the book: www.studentlitteratur.se/signalprocessing under the flap Extramaterial.
